Disaster situations are complex and the management and coordination of response activities are rarely unproblematic. To meet this challenge Lund University and the University of Copenhagen are offering a joint intensive course dealing with disaster response management.

The course will provide students with a theoretical understanding of the need for management and coordination in complex and unpredictable disaster situations as well as the theoretical models and practical tools for effective management. In addition, students will be introduced to the international coordination environment, with its various actors and challenges.

On completion of the course, students will be able to critically analyse management and coordination in disaster situations. This includes both theoretical understanding and applying practical models for responding to disaster situations as well as critically analysing challenges for effective disaster management.

The course is part of the Master of Disaster Management programme.
